Bengaluru, India

SUMMARY

Backend Developer with 1+ year of production experience building scalable Spring Boot microservices and distributed systems. Delivered 35–40% API latency reduction via Redis caching and ~30% asset-retrieval improvement through S3 integration. Skilled in JWT/RBAC security, SAN storage integration, MongoDB/MySQL, and AI-assisted controller automation.

SKILLS

Languages: Java, Python, SQL

Frameworks: Spring Boot, Spring Security, Spring Data JPA, Mockito, JUnit

Databases & Storage: MongoDB, MySQL, Redis, S3-compatible storage, TrueNAS CORE (SAN)

Security & APIs: JWT, Bearer Token Auth, BCrypt, REST API, Swagger/OpenAPI, Postman

DevOps & Tools: Docker, Git/GitHub, IntelliJ IDEA, Power BI

EXPERIENCE

Niral Networks · *Software Development Engineer I*

Aug 2024 – Present

- Reduced API response latency by 35–40% by implementing Redis caching for tenant profiles, configuration states, and metadata across the Niral Edge Controller platform.
- Led SAN integration using TrueNAS CORE, enabling centralized storage management for hypervisor workloads and improving storage provisioning efficiency by ~25%.
- Integrated S3-compatible object storage for multi-tenant white-labeling, improving asset retrieval efficiency by ~30% and enabling scalable branding support.
- Hardened API security by implementing Spring Security with Bearer token authentication and role-based access control (RBAC) across all controller services.
- Contributed to Niral AI backend integration for intelligent monitoring and controller automation; improved team delivery velocity by ~15% through consistent code reviews and Agile participation.

Hackveda · *Python Developer Intern*

Dec 2023 – May 2024

- Built automated Python pipelines for data extraction, transformation, and analysis — reducing manual processing effort by ~30%.
- Delivered 3 end-to-end features for a stock screener platform (advanced filtering, data processing), increasing user engagement by ~20%; improved codebase performance and stability by ~15%.

PROJECTS

Hotel Booking Management System - *Tech: Java, Spring Boot, Spring Security, JWT, MySQL, JUnit, Mockito*

- Built a production-grade RESTful backend with JWT-based stateless authentication, BCrypt password hashing, and 3-tier RBAC (CUSTOMER / HOTEL_MANAGER / ADMIN).
- Enforced strict business rules: overbooking prevention via real-time room-availability tracking, future check-in date validation, and manager-only cancellation authorization.
- Implemented centralized exception handling (HTTP 400/401/403/404), application logging, and a full unit test suite with MockMvc — delivered with Postman API docs and runnable JAR.

Book Rental Platform API - *Tech: Java, Spring Boot, Spring Security, MySQL, BCrypt, JUnit, Mockito*

- Designed a secure REST API with Basic Auth (USER/ADMIN roles), admin-gated CRUD on books, and automated availability tracking on rental/return operations.
- Enforced a two-active-rental business constraint per user, documented all endpoints via Postman, and shipped with full unit tests and setup README.

XMeme — Meme Sharing Backend - *Tech: Java, Spring Boot, MongoDB, REST API, Docker, Swagger*

- Built a complete Spring Boot backend from scratch using MVCS layered architecture; exposed GET/POST APIs supporting captions, image URLs, and retrieval of the 100 newest memes by ID or feed.
- Containerized the application with Docker and documented all endpoints using Swagger/OpenAPI.
